

Mr. Sajid Rafique:

Topic: IP Core Network Transformation challenges

Abstract :

Telecommunications industry has experienced unprecedented growth opportunities and challenges and ever increasing end- customer expectations. Network operators need to employ network assets to deliver a differentiated and preferred user experience, which has become the key driver for adoption and retention. IP networks has a major role in the evolution of networks and services. IP Networks are being transformed to a single, service-delivery oriented, end-to-end All-IP infrastructure. The evolution from legacy TDM and ATM networks to an End to End, Converged, IP based Network is the basis for IP Network Transformation.
